

Personal Portfolio Website

Website Direction & Implementation Guide

Version 2.0

1. Project Overview

This portfolio is intended to be more than a traditional website.

The goal is to create an immersive digital experience that reflects my personality and design philosophy through elegant layouts, refined typography, intentional spacing, and premium scroll-based interactions.

Rather than relying on flashy effects, every animation should serve a purpose—guiding attention, revealing information naturally, and making the browsing experience memorable.

The final result should feel comparable to premium portfolio websites built with Next.js, GSAP, and modern motion design.

2. Overall Design Philosophy

The visual language should feel:

- Premium
- Editorial
- Architectural
- Calm
- Intentional
- Minimal

- Elegant

Every interaction should reinforce my personal design philosophy:

Clarity. Consistency. Purpose.

Avoid playful or exaggerated animations.

Avoid bouncy motions.

Avoid unnecessary visual noise.

Everything should feel refined.

3. Motion Design Principles

Animation should feel smooth and cinematic.

Preferred easing:

Power2.out

Power3.out

Expo.out

Avoid:

Bounce

Elastic

Rubber-band

Cartoon-like easing

Every section should transition naturally into the next.

Animations should never feel rushed.

4. Technology Stack

Preferred stack:

Next.js

React

GSAP

ScrollTrigger

Lenis (smooth scrolling)

Framer Motion (only if necessary)

Vercel deployment

All animations should remain performant.

Target 60 FPS.

Use transforms and opacity whenever possible.

Avoid layout thrashing.

Support prefers-reduced-motion.

5. Global Interactions

Cursor Tooltip

Whenever hovering over any clickable element:

Projects

Buttons

Social links

Navigation

Cards

Show a floating tooltip.

Appearance

Background

#0FB12A

Text

#141918

Shape

Circular

Approx. 90px

Smooth interpolation.

Scale from 0 → 1 on hover.

Hide on touch devices.

Examples:

View Work

View Demo

Open Project

Get In Touch

Dynamic Navigation Text Color

Navigation should automatically switch between:

Dark

Light

depending on the background currently behind it.

Inspired by Juan Mora's portfolio.

Use blend modes or dynamic detection.

Maintain excellent readability.

6. Responsive Design

Desktop-first.

Support:

1920

1440

1280

1024

768

430

390

The mobile version should preserve hierarchy while simplifying animations where appropriate.

Do not force desktop layouts onto smaller screens.

7. Typography

9. Section Specifications

01. Hero Section

Purpose

The Hero section should immediately establish my identity and communicate what I do without overwhelming the visitor. The layout should feel spacious, editorial, and premium, allowing typography, imagery, and subtle motion to create a strong first impression.

This section introduces my design philosophy while encouraging visitors to either explore my work or download my resume.

Layout

Contains:

- Personal logo
- Primary navigation
- Large editorial headline
- Hero portrait
- Geographic location
- Philosophy statement
- Social links
- Primary CTA
- Secondary CTA
- Decorative geometric elements

The overall composition should maintain generous whitespace and visual balance.

Interactions

Navigation

- Smooth scroll to sections
 - Active section highlighting
 - Dynamic text color depending on background
-

Hero Portrait

The portrait should never feel completely static.

Apply a subtle floating motion using GSAP to create a sense of life without distracting from the typography.

Mouse movement should gently influence:

- portrait position
- decorative orbit
- background geometric elements

Maximum translation:

6–10px.

Movement should feel slow, elegant, and almost imperceptible.

Avoid exaggerated parallax.

Decorative Lines & Geometry

Slow continuous movement.

Almost imperceptible.

Purpose is simply to make the page feel alive.

CTA Buttons

Hover

- Slight elevation
- Background transition
- Cursor tooltip appears

Philosophy text

Social links

CTA buttons

Decorative geometry

Use staggered animation.

Preferred easing:

Power3.out

Scroll Behavior

Hero fades naturally into About section.

Avoid abrupt transitions.

Notes

The Hero should feel calm, intentional, and premium.

Avoid excessive animation.

02. About Section

Purpose

Introduce who I am beyond my title.

This section should communicate my approach to design rather than simply listing experience.

The photography should reinforce authenticity by showcasing personal interests outside of work.

Layout

Contains

- Introduction text
 - Editorial quote
 - Three personal photographs
 - Decorative geometric background
-

Interactions

Personal photographs

Hover

Very slight zoom

Soft shadow

Maintain natural feeling.

Entrance Animation

The transition between Hero and About should feel like a continuation of the same story rather than two separate sections.

As the user scrolls:

- Hero content gently fades.
- About content rises naturally.
- Headline reveals line by line.
- Supporting text fades upward.
- Images reveal using a clip-path mask inspired by premium GSAP portfolios.

Avoid zoom effects.

Prioritize elegant reveal animations over dramatic motion.

Scroll Behavior

Images should slightly translate vertically during scrolling.

Very subtle.

Notes

This section should humanize the portfolio.

Avoid making it feel like a resume.

03. Selected Works

Purpose

Showcase real client work through immersive project presentations.

Projects should feel like individual stories rather than thumbnails.

Layout

Each project contains

Hero image

Project title

Industry

Services provided

Preview button

Background imagery

Interactions

Entire project acts as clickable area.

Hover

Image scale

Overlay transition

Cursor tooltip

Examples

View Project

View Case Study

View Demo

Scroll Behavior

The Selected Works section should become the visual centerpiece of the homepage.

Follow the uploaded reference video.

Each project occupies almost the entire viewport.

During scrolling:

- current project gradually scales down
- next project scales upward
- typography crossfades
- project imagery reveals naturally
- background transitions smoothly

Only one project should command the visitor's attention at any time.

Movement should feel cinematic.

Avoid snapping.

Scroll should remain buttery smooth.

Reveal should feel cinematic.

Project Transition

Clicking project

Fade

↓

Scale transition

↓

Navigate to project page

Notes

This is the most important section of the portfolio.

Prioritize elegance over speed.

04. My Approach

Purpose

Explain how I solve design problems.

Rather than listing software or skills, this section communicates the value I provide.

Layout

Headline

Service categories

Descriptions

Minimal dividers

Content

Digital Experiences

Visual Systems

Marketing Assets

Hover

Rows slightly shift horizontally.

Typography weight subtly increases.

Cursor tooltip

Entrance Animation

Headline

↓

Divider

Rows

Stagger each service row.

Scroll Behavior

Simple fade and upward movement.

Avoid excessive motion.

Notes

This section should feel informative.

Keep interactions understated.

05. Call To Action

Purpose

Encourage visitors to begin a conversation.

Should feel optimistic and confident.

Layout

Large editorial heading

Primary CTA button

Abstract geometric background

Heading

Let's create something intentional.

Supporting Text

Open to freelance projects, collaborations, and new opportunities.

CTA

Get in Touch

Hover

Button expands slightly.

Arrow shifts.

Cursor tooltip

Contact

Entrance Animation

As the CTA section enters the viewport:

- background gradually darkens
- SVG outlines begin drawing from a single point
- rectangle borders complete themselves progressively
- headline fades upward while scaling from 95% to 100%
- CTA button appears last

Once the outline animation is complete, scrolling continues naturally into the footer.

The animation should feel like the section is being constructed in real time.

Notes

Should feel like a natural conclusion before the footer.

06. Footer

Purpose

Provide navigation, contact methods, and a final branded impression.

Should feel clean rather than information-heavy.

Layout

Large name typography

Role

Location

Navigation

Capabilities

Social links

Back to top button

Capabilities

Website Design

UI/UX Design

LinkedIn

Instagram

Email

Hover

Underline animation

Cursor tooltip

Open Link

Back to Top

Smooth scroll to Hero.

Rotate arrow slightly on hover.

Entrance Animation

The footer should feel like a calm conclusion to the browsing experience.

The large "Jayson Alegarbes" typography should reveal using a vertical mask rather than individual character animations.

After the typography settles:

- navigation fades upward
 - capabilities stagger in
 - social links appear sequentially
 - back-to-top button becomes visible last
-

Notes

The footer should leave visitors with a memorable final impression.

Large typography is encouraged.

Negative space should remain generous.

07. Global Interactions

Cursor Tooltip

Appears over every interactive element.

Background

#0FB12A

Text

#141918

Approx.

90px

Smooth interpolation.

Scale animation.

Hidden on touch devices.

Dynamic Navigation

Navigation text automatically changes between light and dark depending on page background.

Inspired by Juan Mora's portfolio.

Smooth Scrolling

Use Lenis.

Maintain consistent momentum.

GSAP

Use GSAP throughout.

Preferred easing

Power2.out

Power3.out

Expo.out

Performance

Maintain 60 FPS.

Animate using transforms and opacity.

Lazy-load below-the-fold images.

Use WebP assets.

Support `prefers-reduced-motion`.

Overall Experience

The portfolio should feel like an **interactive editorial experience**, not a traditional corporate website.

Every animation should have a clear purpose:

- Guide attention.
- Reveal content naturally.
- Reinforce clarity and hierarchy.
- Support storytelling.

Avoid decorative motion that exists only for visual effect. The experience should feel calm, premium, architectural, and intentional—reflecting the same values that define your approach to design.

10. Performance

Images

Use WebP

Lazy load

Maintain aspect ratio

No CLS

13. Implementation Notes

This document represents the intended visual and interaction direction.

Minor implementation adjustments may be made where necessary to improve responsiveness, accessibility, animation smoothness, or performance, provided the overall visual identity remains unchanged.

14. Creative Freedom

If an interaction, animation, or implementation can be improved while remaining faithful to the design language and overall vision of this portfolio, you are encouraged to suggest or implement refinements.

The objective is not to recreate the mockups pixel-for-pixel at the expense of user experience, but to produce a polished, premium-quality portfolio that feels modern, intentional, and memorable.
